O SREBRU AG⁺

Hiljadama godina pre nego što je stvoren prvi antibiotik, srebro je korišćeno kao osnovno sredstvo u rešavanju brojnih zdravstvenih problema. Iako je rapidnim rastom farmacije ova činjenica stavljena u drugi plan, mnogobrojna istraživanja stručnjaka u proteklom decenijama potvrdila su da, osim srebra, u prirodi ne postoji drugo sredstvo koje blagotvornije deluje na opšte zdravlje čoveka, bez ikakvih neželjenih dejstava.

Koloidno srebro na patogene mikroorganizme deluje tako što se joni srebra se vezuju za lipoproteinski sloj ćelijskog zida patogenog mikroorganizma. Takođe, joni srebra mogu reagovati i sa enzimima, blokirajući njihovu funkciju i onesposobljavajući mikroorganizam.

Nanočestice srebra penetriraju kroz ćelijsku membranu patogenog mikroorganizma, koje ćelija, prepoznajući ih kao hranu, sama pušta unutra. Po principu "Trojanskog konja", kada uđu u ćeliju, vezuju se za metaboličke enzime ili za DNK i potpuno razaraju ćeliju patogena iznutra. Oksidativnim procesima srebra u dodiru sa kiseonikom i vodom nastaju takozvane oksidativne vrste kiseonika (ROS). To su izuzetno reaktivni radikali koji reaguju sa ćelijskim zidom patogena i momentalno ga razaraju, pri čemu uništavaju mikroorganizam.

ABOUT SILVER AG⁺

Thousands of years before the first antibiotic was created, silver was used as a primary means of addressing numerous health issues. Although this fact was overshadowed by the rapid growth of the pharmaceutical industry, numerous studies by experts in recent decades have confirmed that, apart from silver, there is no other natural substance that has a more beneficial effect on human health without any side effects.

Colloidal silver acts on pathogenic microorganisms by binding silver ions to the lipoprotein layer of the cell wall of the pathogenic microorganism. Additionally, silver ions can react with enzymes, blocking their function and disabling the microorganism. Silver nanoparticles penetrate through the cell membrane of the pathogenic microorganism, which the cell, recognizing them as food, allows inside. By the principle of the "Trojan horse," once inside the cell, they bind to metabolic enzymes or DNA and completely destroy the pathogen cell from within.

Oxidative processes of silver in contact with oxygen and water produce so-called reactive oxygen species (ROS). These are extremely reactive radicals that react with the cell wall of the pathogen and instantly destroy it, thereby eliminating the microorganism.

OUR VISION

Koloidova vizija, usmerena ka rastu i inovacijama, temelji se na pažljivom razumevanju stvarnih potreba naših korisnika, koji su prepoznali jedinstvenost kao ključnu vrednost našeg brenda. Smatramo da su visoka stručnost našeg tima, strogi higijenski i bezbednosni standardi, odgovarajuća oprema i kontrolisani uslovi rada osnova za stvaranje vrhunskih proizvoda.

Naša proizvodnja, koja obuhvata više jedinica, odlikuje se besprekornim radom u skladu sa najvišim standardima proizvodnog menadžmenta, od nabavke sirovina do finalnog proizvoda.

U budućnosti planiramo proširenje proizvodnih kapaciteta, unapređenje tehnoloških procesa i plasman na međunarodna tržišta. Naša inspiracija je neprekidni rast i razvoj, pretvaranje izazova u prednosti i realizacija vizije.

Posvećeni smo razvoju naših zaposlenih, zaštiti životne sredine i doprinosu zajednici. Obrazovanje, usavršavanje i motivacija zaposlenih su naš prioritet, a društvena odgovornost je temelj našeg poslovanja.

Naš cilj je da stvaramo vrednost, postizemo rezultate i neprestano unapređujemo sve aspekte poslovanja. Težimo da budemo prvi izbor za naše korisnike i da nas klijenti, poslovni partneri i zajednica prepoznaju kao stabilnog i pouzdanog partnera.
